This sequence probably encodes viral non-structural proteins of the PT-NANBH viral genome which are antigenic. It was isolated from serum of humans infected by the virus. See also AAQ12236-40 and AAQ12242. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                  Highfield PE,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a self-replicating hepatitis C virus (HCV) colynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replication 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the efficiency. This sequence represents hepatitis C virus replicon 522-3, a self-replicating HCV polynucleotide molecule created from the replicon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                            CC subpassage greater than HCV that have wild-type polyprotein coding CC regions. The polynucleotides of the invention are useful for identifying CC a cell line that is permissive for infection with HCV and detecting CC replication of HCV in cells of the cell line. They are also useful for testing a compound for anti-viral properties and for inhibiting HCV cc infection. They are also useful for the generation of defined HCV virus stocks to develop in vitro and in vivo assays for virus neutralisation, CC attachment, penetration and entry, structure/function studies on HCV proteins and RNA elements and identification of new antiviral targets, a cc systematic survey of cell culture systems and conditions to identify those that support wild-type and variant HCV RNA replication and particle release, production of adaptive variants capable of more efficiency crelication in cell culture, production of alternative animal models for inhibitor evaluation including those supporting HCV variants with altered conditions of cell-free HCV replication assays, production of cell-free HCV replication assays, production of development of cell-free HCV replication, engineering of attenuated HCV derivatives as possible vaccine candidates, engineering of attenuated or defective HCV derivatives for expression of heterologous gene products for gene therapy and vaccine applications and for utilisation of the HCV glycoproteins for targetted delivery of therapeutic agents to the liver or other cell types with appropriate receptors. Vaccine comparising these sequences is useful for inducing immunoprotection to HCV in a primate.

CC Thas present sequence is Hepatitis C virus (HCV) replbBartMan/delta2U's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
This invention describes a novel Hepatitis C virus (HCV) cell culture system comprising human hepatoma cells that contain an integrated HCV-RNA construct (I). (I) contains the HCV-specific RNA segments 5-NTR (nontranslated region), NS (non-structural)3, NS4A, NS4B, NS5A, NS5B and 3'-NTR, and a selectable (marker) gene (II). The cell cultures, and/or (I), are used to prepare, evaluate and/or test therapeutic and/or diagnostic
                                                                                                                                                                                           Cell culture system for hepatitis C virus, useful e.g. in screening for therapeutic agents, comprises human hepatoma cells containing a viral RI construct that includes a selectable gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAA98968

The can also be used for preparation of a liver-specific delivery system for gene therapy, and tidentify cells permissive for HCV replication. Virus RNA replicates autonomously and with high efficiency in this cellular system, so that variations in replication rates can be measured (for screening antivira agents) quantitatively or qualitatively, using standard laboratory equipment. Efficient replication of HCV RNA is only achieved when the specified RNA segments are present and when the transfected cells are maintained under permanent selection pressure

primate

CC polymorleotides comprising non-naturally occurring HCV sequence and HCV convariants that have a transfection efficiency and ability to survive CC variants that have a transfection efficiency and ability to survive CC subpassage greater than HCV that have wild-type polyprotein coding CC regions. The polymorleotides of the invention are useful for identifying CC replication of HCV in cells of the cell line. They are also useful for testing a compound for anti-viral properties and for inhibiting HCV cc infection. They are also useful for the generation of defined HCV virus stocks to develop in vitro and in vivo assays for virus neutralisation, cc systematic survey of cell culture systems and conditions to identify crelasse, production of adaptive HCV variants capable of more efficiency consistency or species tropism, establishment of alternative animal models for cinhibitor evaluation including those supporting HCV variants replication, cc development of cell-free HCV replication assays, production of development of cell-free HCV replication, engineering of attenuated HCV correspondence therapy and vaccine candidates, engineering of attenuated or ceffective HCV derivatives for expression of heterologous gene products for gene therapy and vaccine applications and for utilisation of the HCV correspondences is useful for inducing immunoprotection to HCV in a primate. The present sequence is Hepatitis C virus (HCV) replibartMan/Avail cDNA The invention relates to Hepatitis C virus (HCV) variants which include nolvnucleotides comprising non-naturally occurring HCV sequence and HCV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3600
                                                                                                                                                                                                                                                                                                                                                                                                                                          D)
```

The present invention relates to the use of hepatitis C virus (HCV) assays for identifying a compound that inhibits HCV RNA replication and C reporter assays for identifying a compound that modulates the activity of a gene of interest. The assays are useful for identifying a compound that c inhibits HCV RNA replication or for identifying a compound that modulates the activity of a gene of interest. The HCV assay is useful for high C throughput screening that quantifies both the amount of HCV RNA replication that quantifies both the amount of HCV RNA c replication inhibitory activity associated with a test compound and the c amount of Cytotoxicity associated with the test compound. The compound is useful for treating hepatitis C infection. Assays of the invention have c distinct advantages when compared to qRT-PCR or other methods in that assays of the invention may take place in situ in a detergent based crude cell lysate, which requires no further preparation prior to performing the assays. The assays do not also involve numerous manipulations to add Claim 3; SEQ ID NO 1; 45pp; English.

The sequences are useful for screening for anti-HCV therapeutics, for detecting antibodies to HCV in a biological sample such as blood, serum, plasma, blood cells, lymphocytes, or liver cells from a subject, for deriving authentic HCV components such as replication-complement non-infectious, replication-defective infection-component, and replication-defective non-infectious HCV, in gene therapy or gene vaccination targeted to hepatic tissue for treating an animal infected or susceptible to HCV infection and for studying HCV infection and propagation. The present sequence is a clone of a fragment of the HCV genome which encodes the core-nee and NS3 proteinase/helicase proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2002-490082/52.

                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel Hepatitis C virus (HCV) cell culture system comprising human hepatoma cells that contain an integrated HCV-RNA construct (1). (1) contains the HCV-specific RNA segments 5'-NTR (nontranslated region), NS (non-structural)3, NS4A, NS4B, NS5A, NS5B and 3'-NTR, and a selectable (marker) gene (II). The cell cultures, and/or (I), are used to prepare, evaluate and/or test therapeutic and/or diagnostic agents for HCV infections, and to prepare vaccines against HCV infection (particularly preparation of attenuated HCV). The can also be used for preparation of a liver-specific deliversem for gene therapy, and to identify cells permissive for HCV replication. Virus RNA replicates autonomously and with high efficiency in this cellular system, so that variations in replication rates can be measured (for screening antiviral representation).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cell culture system for hepatitis C virus, useful e.g. in screening for therapeutic agents, comprises human hepatoma cells containing a viral N
                                                                                                                                                                                                                                                                                                                                                                                                     agents) quantitatively or qualitatively, using standard laboratory equipment. Efficient replication of HCV RNA is only achieved when the specified RNA segments are present and when the transfected cells are maintained under permanent selection pressure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 7; Page 30-36; S8pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B
                                                                                                                                                             This invention describes a novel Hepatitis C virus (HCV) cell culture CS system comprising human hepatoma cells that contain an integrated HCV-RNA CC construct [1]. (I) contains the HCV-specific RNA segments 5'-NTR (non-CC translated region), NS (non-structural)3, NS4A, NS4B, NS5A, NS5B and 3'-CC NTR, and a selectable (marker) gene (II). The cell cultures, and/or (I), CC are used to prepare, evaluate and/or test therapeutic and/or diagnostic cagents for HCV infections, and to prepare vaccines against HCV infection (particularly preparation of attenuated HCV). The can also be used for CC identify cells permissive for HCV replication. Virus RNA replicates autonomously and with high efficiency in this cellular system, so that CC variations in replication rates can be measured (for screening antiviral CC agents) quantitatively or qualitatively, using standard laboratory CC equipment. Efficient replication of HCV RNA is only achieved when the CC specified RNA segments are present and when the transfected cells are considered when the considered considered when the considered considered considered cells are considered when the considered cells are considered when the considered cells are ce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

The invention describes a self-replicating hepatitis C virus (HCV) polynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for addenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the G(2042)C/R mutations, transduces and/or replicates with greater efficiency. This sequence represents hepatitis C virus replicon APGK12-years and the self-replicating HCV polynucleotide molecule where the polynucleotide molecule apgress and the self-replicating HCV polynucleotide molecule where the polynucleotide molecule where the polynucleo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             possess enhanced transduction or replication efficiency, useful evaluating potential inhibitors of HCV replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Page 119-129; 140pp;

The invention describes a self-replicating hepatitis C virus (HCV)
CC polynucleotide molecule comprising a 5'-non translated region (NTR),
CC where guanine at position 1 is substituted for adenine, a HCV polyprotein
CC region coding for a HCV polyprotein; and a 3'-NTR region. The self-
CC replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating
CC potential inhibitors of HCV replication. The HCV RNA molecule is also
CC useful for efficiently establishing cell culture replication. The self-
CC replicating polynucleotide molecule contains a 5'-NTR, where G at
CC position 1 is substituted for A, and therefore provides an alternative to
CC existing systems comprising a self-replicating HCV RNA molecule that, in
CC conjunction with mutations in the HCV non-structural region, such as the
CC (2042)C/R mutations, transduces and/or replicates with greater
CC efficiency. This sequence represents hepatitis C virus replicon APGK12, a
CC self-replicating HCV polynucleotide molecule
                                                                                                                                     Query Match

This invention describes a novel Hepatitis C virus (HCV) cell culture system comprising human hepatoma cells that contain an integrated HCV-RNA construct (I). (I) contains the HCV-specific RNA segments 5'-NTR (non-translated region), NS (non-structural)3, NS4A, NS4B, NS5B, NS5B and 3'-XTR (non-structural)3, NS4A, NS4B, NS5B and 3'-XTR (non-structural)3, NS4A, NS5B and 3'-XTR (non-structural)4, NS5B and 3'-XTR (non-structural)4, NS5B and 3'-XTR (non-structural)5, NS4B, NS5B and 3'-XTR (non-structural)5, NS4B, NS5B and 3'-XTR (non-structural)6, NS5B and 3'-XTR (non-structural)6, NS5B and 3'-XTR (non-structural)6, NS5B and 3'-XTR (non-structural)7, NS5B and 3'-XTR (non-structural)7, NS5B and 3'-XTR (non-structural)8, NS4B, NS5B and 3'-XTR (non-structural)9, NS4B, NS5B and 3'-XTR (non-structural)9, NS4B, NS4B, NS5B and 3'-XTR (non-structural)9, NS4B, NS4B, NS4B, NS5B and 3'-XTR (non-structural)9, NS4B, NS4B
